**STUDY REPORT**

**Effect of Granulated GlucosCare® Herbal Tea in Type 2 Diabetes Mellitus Patients (Non-Insulin Requiring)**

**Conclusion**

The efficacy of the Granulated GlucosCare® Herbal Tea in 24 Type 2 Diabetes Mellitus patients (Non-Insulin Requiring) was studied over a period of 3 months. The blood test results in selected subjects have proven the herbal tea has an effective hypoglycaemic and lipid lowering properties. Though there is considerable evidence about health related benefits of lifestyle modifications for people with type-2 diabetes, it has often been observed that compliance to lifestyle related recommendations is not satisfactory among South Asians [2-4]. Diet, a lifestyle behavior, has been reported as a management domain with very low compliance among diabetics [5]. There are also other confounding factors that might have affected the study results in free-living diabetics. Despite considering these limitations the present intervention study has proven the efficacy of the GlucosCare herbal tea among selected Type 2 Diabetes Mellitus patients (Non-Insulin requiring).

**Clinic for Endocrinology, Diabetes and Metabolic Diseases**  
**Clinical center of Serbia**

**Study title:**  
The effect of GlucosCare herbal tea on metabolic parameters in Type 2 diabetes patients in Serbia

**Conclusion**  
This study has shown that 3 months consumption of GlucosCare herbal tea, at least three times daily, significantly reduced HbA1c (approximately by 1.6%) together with improvement in fasting blood glucose levels in type 2 diabetes patients.  
It seems, according to these results, that GlucosCare tea could be helpful in motivated, obese type 2 diabetes patients to lose weight.  
Finally, GlucosCare herbal tea was very safe and effective additional treatment for type 2 diabetes patients already treated with oral hypoglycaemic agents and/or insulin.

**Test Report** No. H94C130200792HC Date: Sep 10, 2015 Page 6 of 6

**CONCLUSION 結論**

The stability of submitted sample identified as GlucosCare Tea was studied under the general storage condition. Throughout the study, the appearance, identification, determination of water, microbial limit test and assay of Gallic acid of the test material at each time-point were evaluated against the product specification.

Under the general storage condition, the appearance, identification, determination of water, microbial limit test and assay of Gallic acid of the test material meet the product specification after storage for 3 years.

When tested as specified, the test material is considered to be stable under the general storage condition for 3 years.

對送檢為GlucosCare茶之試樣樣品於一般貯存條件下進行穩定性測試。在貯存期間，送檢樣品均持續符合外觀、識別、水份、微生物限度及沒食子酸含量、沒食子酸之片或標之品質標準等比較。

在一般穩定性測試的貯存條件下存放三年後，供試樣品之外觀、識別、水份、微生物限度及沒食子酸含量均符合片或標之品質標準。

根據以上的測試結果，供試樣品均符合一般貯存下三年存放標準。
